| <input type="checkbox"/> Retreatment | <input type="checkbox"/> Surgery |
| <input type="checkbox"/> Other | |

Prior to your appointment, please visit www.scendo.com to complete your full medical history form. Your cooperation is greatly appreciated.

Scope of Practice

Endodontics, also known as root canal therapy, is the dental specialty which involves the diagnosis, prevention and treatment of oral pain and disease that originate from within the tooth. Root canal therapy includes: removal of the pulp tissue (nerve) and sealing the canal space; surgical removal of diseased tissue, and repair of root structures; retreatment of teeth previously endodontically treated.

Dr. Cohen is a dental specialist (Endodontist) who has accredited educational training and expertise in these procedures, and has limited his practice to providing endodontic therapy. He is also involved in teaching Endodontics at the University of Toronto, Faculty of Dentistry.

Our practice is dedicated to the delivery of specialized dental care in the most courteous, professional and comfortable manner possible. For patients with a certain degree of anxiety about their treatment, minor to moderate levels of sedation are available.

Thank you for seeking treatment at our office.
